NATHAN MCDONOUGH

Software Developer

GroveCity, OH USA • (937) 450-5740 • nathan@nathanray.dev • github.com/NathanRayM • nathanray.dev

PROFESSIONAL SUMMARY

Software Developer with hands-on experience building and supporting responsive web applications using JavaScript, TypeScript, React, Node.js, Express, and REST APIs. Brings a strong background in technical support, SaaS training, systems troubleshooting, and client communication, with experience translating business and user needs into practical software solutions. Focused on writing maintainable code, applying modern development practices, and continuing to expand expertise in application integration, testing, and scalable software development.

TECHNICAL AND PROFESSIONAL SKILLS

Tech Stack: HTML • CSS • JavaScript (ES6+) • TypeScript • React • Node.js • Express.js • Tailwind CSS • Rest API's • Git • GitHub • Vite • NPM • SQL

Concepts: Responsive Design • Accessibility (WCAG) • Object-Oriented Programming (OOP) • Client Side Storage

Professional: Problem Solving • Technical Documentation • Client Communication • Project Coordination • Troubleshooting • Leadership • Teamwork • Critical Thinking

TECHNICAL PROJECTS

Sound Cellar Recording Studio Website | React, JavaScript, Node.js, Express.js, HTML, CSS

Studio website using React & Node.js/Express.js with audio demos, responsive design, optimized SEO, accessibility, & performance for recording, mixing, & mastering services.

- Built and deployed a responsive React website from scratch for a recording studio to showcase services, strengthen online visibility, handle customer inquiries, and optimize rich media delivery.
- Engineered an asynchronous Node.js/Express.js server architecture to power server-side email dispatching, contact endpoints, and secure data handling.
- Optimized frontend client performance using modern rendering patterns, resulting in responsive, fluid layouts across mobile and desktop viewpoints

Dual Source Audio Player (A/B Audio Engine) | JavaScript, HTML, CSS

A browser-based audio player created for audio engineers to showcase mixed and unmixed versions of songs on their websites, helping potential clients evaluate sound quality and production work.

- Developed a custom, production-ready interactive audio engine specifically for sound engineers to perform instant sample accurate A/B comparisons between mixed and unmixed audio paths.
- Programmed persistent state playback controls to maintain synchronized audio timelines when toggling sources.
- Implemented accessible controls meeting WCAG contrast and accessibility baselines for broad consumer hardware compatibility.

Weather Dashboard Application | JavaScript, HTML, CSS, REST API's

A web application that provides users with current weather details based on their location.

- Built an asynchronous data dashboard leveraging weather web services to calculate real-time forecasts, current weather matrixes, and weekly trends.
- Programmed a custom auto-populating query input field utilizing data streams to provide instant location suggestions.
- Architected global application state handling to transition all application metrics between Metric and Imperial values instantly without layout shifting.

EXPERIENCE

Sound Cellar Recording | *2016 – Present*
Owner / Software Developer

- Managed end-to-end client projects from consultation through final delivery, balancing timelines, technical requirements, and stakeholder expectations.
- Built and maintained studio websites, creating and updating online content, improving user-facing presentation, and supporting business visibility.
- Coordinated project scheduling, client communication, and concurrent production workflows across multiple active engagements.
- Built, configured, and optimized custom workstations, including hardware installation, system setup, and performance troubleshooting.
- Installed, configured, and maintained software, drivers, plugins, and operating systems to support stable, high-performance production environments.
- Maintained technical infrastructure, including signal routing systems and studio hardware, to ensure reliable operation and efficient workflows.
- Delivered client-focused solutions by translating creative goals into technical execution and polished final products.

JP Morgan Chase | *2012 – 2016*
Designated Program Coordinator

- Provided client support through in-person, phone, and email channels, ensuring timely issue resolution and consistent service delivery.
- Investigated client issues, identified appropriate solutions, and escalated complex cases to the correct departments for resolution.
- Trained clients on company SaaS platforms, guiding users through product functionality, onboarding, and troubleshooting.
- Created procedural and operational documentation to improve departmental consistency, knowledge sharing, and workflow efficiency.
- Maintained accurate service records and client documentation while supporting compliance with company policies and regulatory requirements.

Teleperformance USA | *2006 – 2012*
Broadband Support Manager

- Led a technical support team resolving broadband connectivity, device configuration, and network-related issues.
- Managed escalated support cases including provisioning, software configuration, and complex troubleshooting.
- Coached and mentored support agents, enhancing troubleshooting efficiency, technical accuracy, and customer satisfaction.
- Analyzed technical metrics and reporting data to identify trends and implement process improvements.
- Troubleshot hardware, firmware, drivers, improving connectivity and system performance.

EDUCATION

High School Diploma | North High School | Springfield, Ohio USA
